

Sporting Ethos — User Flow

GigPoint Hackathon 2026 · Track 4 (Healthcare Tech) · Milestone 1 Project: Real-Time Patient Check-In, Live Queue, Ambient Charting & Pharmacy

1. Roles & access

Role	URL	Access	Does
Patient	/checkin	via QR	Check in, receipt, live position, "your turn", visit summary
Reception	/	open (kiosk)	Live queue, + Add patient, reports/Excel, QR, call expert
Expert	/expert	code ethos	Current consultation, ambient charting, mark done, call reception
Pharmacy	/pharmacy	code pharmacy	Dispense by appointment ID, billing, inventory

2. Patient flow

[Universal QR at reception] (one code for everyone)
| scan
▼
/checkin — language switch: EN / हिन्दी / తెలుగు — A+ (large text + voice guide)
• Full name (required)
• Age + Gender (optional)
| tap "Check in"
▼
Sequential appointment ID (APT-####) assigned automatically → appears on dashboards instantly
|
▼
 "You're checked in" — queue position ring + estimated wait
+ collapsible receipt (logo, timestamp, UUID, SHA-256 hash, Verified)
| page stays live
▼
 "It's your turn" — chime + voice in the chosen language
 "Your visit summary" — once the consultation is charted
 "Consultation complete"

- **No appointment ID is typed** — it is auto-generated in sequence for everyone.
- **Accessibility mode (A+)**: enlarges the UI and reads the prompts aloud in the selected language — for elderly / injured / non-English speakers.

3. Reception flow (/)

Live Queue · Reports · Settings + + Add patient · Call expert · Expert · Pharmacy links
|
NEW ARRIVAL (pushed <1s): card highlights · chime · voice "<name> has arrived"
▼
Per patient: Call next · Pause · Left (LWBS) · Emergency (jump queue)
+ Add patient: register a desk walk-in (auto sequential ID, source = reception)
 Call expert → rings the Expert Console (blink + chime)
Incoming "expert is calling" → blinking banner + chime + voice

4. Expert flow (/expert , code-gated)

Now Consulting (hero): patient name + age/gender chips + live timer

- └ Ambient charting: • Start recording → Stop & generate
 - audio → FastAPI → Groq Whisper (transcript) → Groq Llama (structured JSON)
 - Summary / Symptoms / Prescriptions / Actions → ↓ Download PDF
 - saved to Supabase → patient sees "Your visit summary"
- └ ✓ Mark consultation done

Waiting queue (sidebar): Call each patient • toggle Emergency

- 🔔 Call reception → rings the Reception dashboard (blink + chime)

5. Pharmacy flow (/pharmacy , code-gated)

Tabs: Counter • Inventory

COUNTER:

- type Appointment ID → find patient
 - patient's prescribed medicines (from AI consultation) AUTO-MATCH to inventory
 - editable order (qty +/-, add/remove any stocked medicine)
 - Take payment → generates BILL PDF (tied to appointment ID)
 - decrements stock → records sale (→ Reports revenue)
 - (re-opening a paid appointment shows the bill again to re-download)

INVENTORY:

- add / edit / remove medicines (name, ₹ price, stock, category); low-stock highlighted

6. Reports flow (/ → Reports)

Filters: Scope (Today | All time) • Gender • Age group • Status

KPIs: Attended • Completed (%) • Avg wait • LWBS rate % • Waiting now • Pharmacy revenue ₹

Insights: most common gender • busiest age group • peak arrival hour

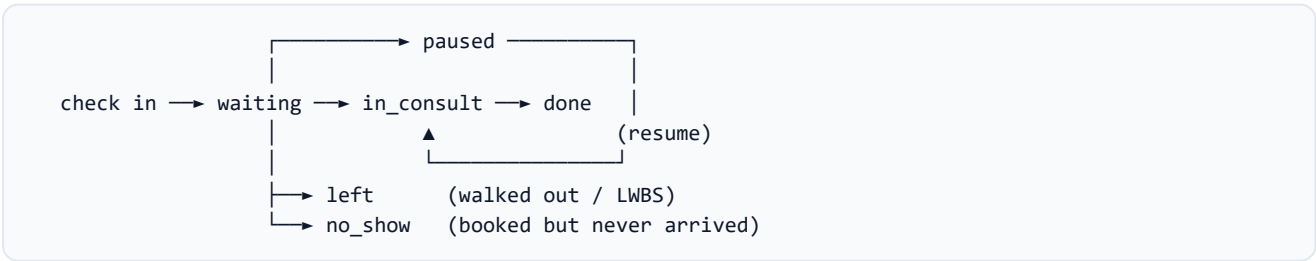

Charts: gender donut • status donut • age bars • arrivals trend • booking-type donut

- Top reasons / conditions (from consultations)

Table: name, age, gender, booking (Pre-booked/Walk-in + APT), reason, status, times

↓ Download Excel (.xlsx of the filtered list, incl. reason + pharmacy bill)

7. Status lifecycle

Any card can be **re-queued** to waiting if a status was set by mistake.

8. Edge cases handled

Scenario	Behaviour
Desk walk-in	+ Add patient → auto sequential ID, source = reception (Walk-in)

Scenario	Behaviour
Stepped away	Pause → stays listed, not called
Patient left	Left → LWBS counter +1, queue reorders
Emergency arrival	Emergency → jumps to #1, all ETAs update on phones
Wrong status	Re-queue
Mic / AI unavailable	Charting falls back to a labelled sample
Prescription not stocked	Shown; pharmacist adds any inventory item manually
Low stock	Highlighted red in inventory; decremented on each sale
Phone can't scan QR	Settings warns to open the dashboard on the LAN address (192.168.x.x)
Non-English / low-tech / elderly	Language switch (EN/HI/TE) + accessibility voice-guide
Network flaky	Local mock mode keeps the app running (realtime across tabs)
