

Sporting Ethos — Milestone 3: Presentation & Demo Script

GigPoint Hackathon 2026 · Track 4 (Healthcare Tech) Deliverable: ~10-minute presentation / video (problem → analysis → solution → demo → impact)

Slide / segment outline (with timings)

#	Segment	Time	Say this
1	Hook	0:30	"At Sporting Ethos, a patient checks in — but the doctor finds out minutes later, from a delayed email. In that gap, patients get missed, slots get wasted, and revenue leaks."
2	Problem	1:00	The brief: check-in confirmation is delayed → experts have no real-time signal → missed check-ins → inaccurate records, inefficiency, lost revenue.
3	Analysis	1:00	Root cause = a slow, single-channel confirmation you have to <i>trust</i> . Fix = instant, multi-channel, impossible-to-miss confirmation + a live managed queue.
4	Solution overview	1:00	One responsive web app + a small AI backend. Roles: Patient · Reception · Expert · Pharmacy. Powered by Supabase realtime (<1s).
5	LIVE DEMO	4:00	(script below)
6	Under the hood	0:45	Supabase Postgres + Realtime, SHA-256 receipts, Groq Whisper+Llama for charting, all deployable & scalable (multi-clinic ready).
7	Impact	1:00	Confirmed in <1s, zero missed check-ins, LWBS visibility, recovered revenue, pharmacy revenue, accessibility in 3 languages.
8	Close	0:45	"We didn't just confirm check-ins — we removed uncertainty on every channel and turned the waiting room into a live, revenue-aware, inclusive system."

Live demo script (4 min) — phone + laptop side by side

- Check in (phone):** scan the QR → enter name → tap Check in. *Show the language switch (EN/हि/తె) and the  A+ accessibility button.*
- Instant confirmation (laptop):** the card **flashes, chimes, and says "⟨name⟩ has arrived"** in under a second. Point at the "Confirmed in <1s" metric.
- Emergency:** flag a waiting patient as Emergency → they jump to #1, everyone's ETA updates live on the phones.
- Call next:** the patient's phone rings + shows "It's your turn."
- Ambient charting (Expert console):** Start recording → speak a mock consultation → Stop → **real AI notes** (symptoms/prescriptions/actions) → Download PDF. Patient's phone shows the visit summary.
- Pharmacy:** open /pharmacy → enter the appointment ID → the **prescribed medicines auto-match to inventory** → Take payment → **bill PDF** prints.
- Reports:** show demographics donuts, **top conditions from consultations**, and **pharmacy revenue**; hit **Download Excel**.
- Intercom:** Expert hits "Call reception" → the reception screen **blinks + chimes**.

Impact (the money slide)

- Business:** fewer missed check-ins → accurate records, recovered slots, **pharmacy revenue captured**, higher throughput.
- Measured, on-screen:** "Confirmed in <1s", live waiting/LWBS/no-show counters, revenue ₹.

- **Social:** dignity & certainty for patients; **accessibility** (large text + voice) and **3 languages** (English/Hindi/Telugu) for elderly, injured, and non-English speakers.
- **Operational:** real-time queue truth, emergency handling without chaos, reception↔expert intercom.
- **Scalable:** cloud-native (Supabase), phone + screen only, `clinic_id` -ready for a chain.

One-line pitch

"Instant, multi-channel check-in confirmation — plus ambient AI charting, pharmacy billing, and live analytics — in three languages, confirmed in under a second."
